VACUUM GAUGE WITH ADAPTER FOR VACUUM PUMP WITH BATTERY

DESCRIPTION

This vacuum gauge with battery vacuum pump adapter is an assembled kit consisting of a vacuum gauge and a brass "T", all carefully designed for maximum performance. The set is completed with a brass fitting, which includes a 1/4 SAE threaded female nut and a 1/4 SAE male thread, providing a robust and durable solution. For more accurate control, it also includes a ball valve equipped with a shut-off knob. In addition, the vacuum gauge has a diameter of 50 mm, and its dial operates over a range from -30 to 0 inHg (inches of mercury), which is equivalent to a range of 0 to 1,000 mbar, taking 1,000 millibars as ambient pressure (or zero pressure). This product is optimized to always ensure maximum performance.

APPLICATIONS

Vacuum gauge with accessories for connection to a refrigeration vacuum pump. With this accessory the vacuum quantity in a refrigeration circuit can be measured. It can be measured in two different nomenclatures: in mbar and inHg. Once the vacuum has been taken and the necessary time has expired, the valve incorporated in the accessory can be shut off to close the circuit and check if there are any leaks in the system.

VACUUM GAUGE CHARACTERISTICS

- Vacuum gauge of Ø50
- Made of PVC
- 1/8" back connection
- Range 0 a -30 inHg (inches of mercury)

ACCESSORY CHARACTERISTICS

- Connected to the vacuum gauge by a sealed 1/8" thread
- Ball valve incorporated
- It includes a female thread (swivel nut) of 1/4 SAE
- It includes a male thread of 1/4 SAE

RECOMMENDATIONS

It is recommended to use this vacuum gauge with battery vacuum pump adapter on our product 4646880000 (battery vacuum pump).
